## MAINTENANCE & REFURBISHMENT

---

### Plant maintenance & refurbishment

#### Combit Plant maintenance & refurbishment

Our on-site maintenance capabilities include the overhaul of plant such as pumps, tanks, valves, mixers, hydraulic equipment and flange joints. All on-site work is carried out by experienced personnel holding safety passports.

#### Refurbishing of pumps

Pumps are the core of your fluid transfer processes. Combit understands the importance of keeping them in perfect working condition. We refurbish any model of industrial pump that has been exposed from wear, corrosion or chemical attacks with high tech composite materials. In our top modern dedicated workshops, each item receives the treatment of experienced craftsmen and technicians. All refurbished units are fully tested and certified before re-installation. The benefits are lower power consumption and longer life length of your pumps; hence the total cost of ownership is reduced substantially. All work and material is according to ISO 9001 and ISO 14001 standards to assure the highest quality and environmental control of the work.

#### Refurbishing of tanks

Oil, as a natural resource, and products coming from oil becomes more scarce and valuable in the future. Based on this perspective, Combit's vision is with quality and care to set the standards of tank condition that will add to a sustainable development. As all companies' needs to comply with increasing health, safety and environmental requirements there is a natural need to look after your storage or process tanks, while simultaneously focusing on cost-effectiveness. With mobile spray equipments we cover tanks and concrete retaining walls with high technology composite material. The spray equipments are designed to cover large jobs in short time.
